

EGG-SHAPED PIPE STOPPERS

These pipe stoppers are used for sealing egg-shaped sections and they are also suitable for the use in leak tests with water or air. These stoppers are manufactured in two forms. The forms that copy the shape of the pipe and the cushion-shaped forms. The former ones

are commonly used for smaller sections while the latter are suitable for larger sections because they can be installed to sewerages through the standard gullies. The standard product line consists of 13 models each of different size.
